

Instructor: Dr. Yusuf Pisan, pisan@uw.edu UW1-260Q (425) 352-3741

Class: MW 1:15-3:15pm. UW1-021

Office Hours: Monday 3:30-4:30pm, Thursday 4:30-5:30pm at UW1-260Q. Email me 24 hours ahead of time to guarantee that I will be in my office, otherwise I might be grabbing coffee or wondering around campus.

Course Description

This sequenced course integrates mathematical principles with detailed instruction in computer programming. Topics include development of algorithms; algorithm analysis; object-oriented programming; abstract data types including trees, priority queues, graphs, and tables; regular expressions and context-free grammars. Prerequisites: CSS 342 with a grade of 2.0 or better.

Learning Objectives

- An understanding of trees, balanced trees, heaps, hash tables and their uses
- An understanding of the graph data structure and associated algorithms
- Ability to design and implement a complex object-oriented problem (using inheritance)
- An understanding of the formal notation for a programming language

Course Goals

Refining and extending the concepts and skills introduced in CSS 342, students develop competencies associated with problem solving, design, testing, and programming techniques. Topics include ADTs, data structures, related algorithms, and object-oriented design & programming. Formal automata theory as it applies to programming languages is introduced. Good software engineering and algorithm analysis techniques are used throughout.

As with most technical courses, besides ability and motivation, it takes time to learn and master the subject. No one succeeds without practice! Expect to spend an average of 15 hours a week outside of class time for this course; some of you may spend more time, some less time.

Textbooks

- [Carrano] Frank M. Carrano and Timothy M Henry, Data Abstraction and Problem Solving with C++, Seventh edition, Addison-Wesley, 2017.
- [Cusack] Charles A. Cusack and David A. Santos, [Active Introduction to Discrete Mathematics and Algorithms](#), Version 2.6.3, March 30, 2018.
- [Chen] William Chen, [Discrete Mathematics](#)
- [Rosen] Kenneth H. Rosen, Discrete Mathematics and Its Applications, Seventh Edition, , McGraw Hill, 2011.

Grading

- Exercises: 15%

- Projects: 25%
- Exam-1: 30%
- Exam-2: 30%

There is no final exam. Exams are not cumulative.

A scale of 90s (3.5■4.0), 80s (2.5■3.4), 70s (1.5■2.4), 60s (0.5■1.4) is a rough guide. A student who achieves 75% of the possible points will receive a 2.0 grade in this course. Students with 95% and above will receive a 4.0 grade. Scores in between will be interpolated.

Assignment Submission: Exercises will be graded as Complete/Incomplete and often completed during the class hour.

You can miss 2 in-class exercises without penalty, but I strongly recommend attending all classes and being engaged with the material throughout the quarter. I will not excuse you from any class activities. If you miss more than 2 in-class exercises, it will impact your grade.

For projects, you can submit one and only one project 24 hours late without any penalty. If you are using your 24 hour extension, post a brief explanation to "Using Extension" assignment.

Other than when working in pairs, talking about code is OK, looking at each others code is not OK. Looking at references to understand how a functions gets used is OK; looking up assignment solutions is not OK. It is also not acceptable for your code or solutions to be publicly accessible on the web (for example, a public GitHub repository). Plagiarism will result in an assignment score of zero and a misconduct letter in your student record. Please be very careful to adhere to the student code of conduct: <http://www.washington.edu/cssc/for-students/student-code-of-conduct/> I will make allowances for exceptional circumstances such as sickness, bereavement and official university business. I will not make exceptions for work, other classes, personal obligations, etc.

AI Usage: You are permitted and encouraged to use Github Copilot when completing projects. I want you to become proficient in using AI for your programming, BUT at the

same time you should be able to complete assignments and write code without using AI. You need to use AI for brainstorming, for improving your code, for generating the easy test cases, not just for copy-pasting (or accepting suggested code) without understanding.

You are NOT allowed to use AI for the in-class exercises. The exams will be on pen and paper, so you will not have access to AI tools. It is important to understand the concepts fully. AI should enhance your performance, not dictate what you can do.

Attendance: Attend all classes. You are responsible for all the material covered in class, as well as any announcements including change of due dates or assignment specifications. There will also be graded in-class group exercises to practice problem solving. If you miss a class, I expect you to make-up for it on your own by asking your friends, reviewing the textbook, lecture materials, etc.

Communication: We will use discord as an extension of the classroom. Use a meaningful nickname and act professionally. If your question can be answered publicly by me or by a classmate, post it to discord. Use the office hours for complex issues or topics you are struggling with.

Use your UW email rather than "Canvas Messaging" to communicate directly with me. "Canvas Submission Comments" should only be used to draw the grader's attention to a specific part of your submission.

Access and Accommodations: Your experience in this class is important to me. If you have already established accommodations with Disability Resources for Students (DRS), please communicate your approved accommodations to me at your earliest convenience so we can discuss your needs in this course.

If you have not yet established services through DRS, but have a temporary health condition or permanent disability that requires accommodations (conditions include but not limited to; mental health, attention-related, learning, vision, hearing, physical or health impacts), you are welcome to contact DRS at 425-352-5307 or uwbdrs@uw.edu. DRS offers resources and coordinates reasonable accommodations for students with disabilities and/or temporary health conditions. Reasonable accommodations are established through an interactive process between you, your instructor(s), and DRS. It is the policy and practice of the University of Washington to create inclusive and accessible learning environments consistent with federal and state law.

Religious Accommodation Policy:

See <https://registrar.washington.edu/staffandfaculty/religious-accommodations-policy/>

Problems: If you are having difficulties, come and talk to me. If I don't know about it, I cannot help you. Small problems can be fixed easily early in the quarter, but might become impossible to fix later on.

See the [School of STEM Course Policies](#), which covers:

- Academic Integrity
- Access and Accommodations
- Classroom Emergency Preparedness
- For Our Veterans
- Grade of Incomplete
- Inclement Weather
- Parenting Resources
- Religious Accommodations
- Respect for Diversity
- Student Support Services
- Surviving Sexual and Relationship Violence

- Wonder How to Address Faculty?

Course Calendar

Week	Topics	Notes
Week-1 24 Sep	Introduction, C++	Multiple exercises due (email, discord, unix, github, ...)
Week-2 29 Sep 1 Oct	Review of 342 Trees	
Week-3 6 Oct 8 Oct	Graphs	
Week-4 13 Oct 15 Oct	N-ary Trees	BST Project
Week-5 20 Oct 22 Oct	Design Patterns Hash Table	
Week-6 27 Oct 29 Oct	Review Exam-1	Graph Project

Week-7 3 Nov 5 Nov	Polymorphism	
Week-8 10 Nov 12 Nov	Theory of Computation FSA	
Week-9 17 Nov 19 Nov	Turing Machine	
Week-10 24 Nov 26 Nov	TBD	Movies Project
Week-11 1 Dec 3 Dec	Review Exam-2	
Finals Week	No final exam
