Course Description

Principles of operating systems, including process management, memory management, auxiliary storage management, and resource allocation. Focus on the structure of the popular desktop and real-time operating systems. May not be repeated. Prerequisite: a minimum grade of 2.0 in CSS 343.

Learning Objectives

This course contributes to the following ABET outcomes:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, , and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Course Goals

As with most technical courses, besides ability and motivation, it takes time to learn and master the subject. No one succeeds without practice! Expect to spend an average of 15 hours a week outside of class time for this course; some of you may spend more time, some less time.

Textbooks

Operating System Concepts, <https://www.os-book.com/OS10/> 10th edition, Abraham Silberschatz, Peter Galvin, and Greg Gagne, Addison-Wesley, 2013. (available as an e-text)

Optional References

[*Understanding the Linux Kernel*](#), Daniel P. Bovet and Marco Cesati, O'Reilly, 2000

[*The Design of the Unix Operating System*](#), Maurice J. Bach, Prentice Hall, 1987

[*Advanced Programming in the Unix Environment*](#) 2nd Ed, W. Richard Stevens, Addison Wesley, 2005

Grading

- Exercises: 10%
- Homeworks: 20%

- Projects: 30%
- Exam-1: 20%
- Exam-2: 20%

There is no final exam. Exams are not cumulative.

A scale of 90s (3.5■4.0), 80s (2.5■3.4), 70s (1.5■2.4), 60s (0.5■1.4) is a rough guide. A student who achieves 75% of the possible points will receive a 2.0 grade in this course. Students with 95% and above will receive a 4.0 grade. Scores in between will be interpolated.

Assignment Submission: Exercises will be graded as Complete/Incomplete and often completed during the class hour.

For projects, you can submit one and only one project 24 hours late without any penalty. If you are using your 24 hour extension, post a brief explanation to "Using Extension" assignment.

Other than when working in pairs, talking about code is OK, looking at each others code is not OK. Looking at references to understand how a functions gets used is OK; looking up assignment solutions is not OK. It is also not acceptable for your code or solutions to be publicly accessible on the web (for example, a public GitHub repository). Plagiarism will result in an assignment score of zero and a misconduct letter in your student record. Please be very careful to adhere to the student code of conduct: <http://www.washington.edu/cssc/for-students/student-code-of-conduct/> I will make allowances for exceptional circumstances such as sickness, bereavement and official university business. I will not make exceptions for work, other classes, personal obligations, etc.

Attendance: Attend all classes. You are responsible for all the material covered in class, as well as any announcements including change of due dates or assignment specifications. There will also be graded in-class group exercises to practice problem solving. If you miss a class, I expect you to make-up for it on your own by asking your friends, reviewing the textbook, lecture materials, etc.

Communication: We will use discord as an extension of the classroom. Use a meaningful nickname and act professionally. If your question can be answered publicly by me or by a classmate, post it to discord. Use the office hours for complex issues or topics you are struggling with.

Use your UW email rather than "Canvas Messaging" to communicate directly with me. "Canvas Submission Comments" should only be used to draw the grader's attention to a specific part of your submission.

Access and Accommodations: Your experience in this class is important to me. If you have already established accommodations with Disability Resources for Students (DRS), please communicate your approved accommodations to me at your earliest convenience so we can discuss your needs in this course.

If you have not yet established services through DRS, but have a temporary health condition or permanent disability that requires accommodations (conditions include but not limited to; mental health, attention-related, learning, vision, hearing, physical or health impacts), you are welcome to contact DRS at 425-352-5307 or uwbdrs@uw.edu. DRS offers resources and coordinates reasonable accommodations for students with disabilities and/or temporary health conditions. Reasonable accommodations are established through an interactive process between you, your instructor(s), and DRS. It is the policy and practice of the University of Washington to create inclusive and accessible learning environments consistent with federal and state law.

Religious Accommodation Policy:

See <https://registrar.washington.edu/staffandfaculty/religious-accommodations-policy/>

Problems: If you are having difficulties, come and talk to me. If I don't know about it, I cannot help you. Small problems can be fixed easily early in the quarter, but might become impossible to fix later on.

See the [School of STEM Course Policies](#), which covers:

- Academic Integrity
- Access and Accommodations
- Classroom Emergency Preparedness

- For Our Veterans
- Grade of Incomplete
- Inclement Weather
- Parenting Resources
- Religious Accommodations
- Respect for Diversity
- Student Support Services
- Surviving Sexual and Relationship Violence
- Wonder How to Address Faculty?

Course Calendar

Week	Topics	Notes
Week-1 25 Sep	Introduction	
Week-2 27 Sep 2 Oct	OS Structure Processes	
Week-3 7 Oct 9 Oct	Threads and Scheduling	
Week-4 14 Oct 16 Oct	Process Synchronization	
Week-5 21 Oct 23 Oct	Main Memory	
Week-6 28 Oct 30 Oct	Review Exam-1	
Week-7 4 Nov 6 Nov	Virtual Memory	
Week-8 11 Nov 13 Nov	No class: University Day for System	
Week-9 18 Nov 20 Nov	Deadlocks System Protection	
Week-10 25 Nov 27 Nov	Thanksgiving - No class	
Week-11 2 Dec 4 Dec	Review Exam-2	
Finals week	No final exam
